PROFESSIONAL SUMMARY

Software Engineer specializing in Java-based backend development, with professional experience in enterprise software engineering at Dell Technologies Bulgaria. Strong focus on Java, Spring, and Maven, with hands-on experience across the software development lifecycle, including requirements analysis, implementation, testing, maintenance, and production support. Focused on building reliable, maintainable, and scalable backend solutions while following established software engineering practices.

Experienced with relational and NoSQL databases, CI/CD pipelines, containerization, orchestration, monitoring, and logging tools. Also familiar with C#, ASP.NET, Python, and a range of development and infrastructure tools used in enterprise environments.

Actively leverage AI-assisted software engineering practices and LLM-based tools, including Claude Opus, GPT, and Gemini, to support code generation, analysis, and problem-solving. Experienced in pod-based development workflows that use shared project knowledge and context to support AI agents and improve productivity. A strong team player with good communication and collaboration skills, comfortable discussing technical requirements, coordinating with colleagues, and adapting to changing priorities in Agile Scrum and Waterfall environments.

TECHNICAL SKILLS

Core	Java, Spring Framework, Maven
Methodologies	Agile Scrum, Waterfall
Databases	PostgreSQL, MongoDB, Oracle, Redis cache
DevOps & CI/CD	Docker, Kubernetes, Helm, Jenkins, GitLab CI/CD Pipelines
Version Control	Git, GitHub, GitLab
Monitoring & Observability	New Relic, Splunk, Dynatrace
Additional Technologies	C#, ASP.NET, Python, PHP, Javascript, React, Vue
AI-Assisted Development	Claude Opus, GPT, Gemini, LLM-based coding tools, agentic development workflows

Messaging & Event Streaming	RabbitMQ, Apache Kafka

PROFESSIONAL EXPERIENCE

Dell Technologies Bulgaria EOOD

Senior Software Engineer | March 2026 – Present

- Contribute to enterprise software development and maintenance, with a primary focus on Java, Spring, and Maven.
- Participate across the software development lifecycle, including implementation, testing, troubleshooting, and production support.
- Collaborate with engineers and stakeholders to clarify requirements, discuss technical solutions, and deliver maintainable software.
- Use AI-assisted development tools and shared agent context to support coding, analysis, and problem-solving.

Dell Technologies Bulgaria EOOD

Cloud Software Engineer | August 2021 – July 2022

- Developed and maintained software products in an enterprise environment.
- Participated in software development and maintenance activities and collaborated with team members to support product functionality.

Dell Technologies Bulgaria EOOD

Software Engineering Intern | January 2021 – July 2021

- Supported software development and maintenance activities.
- Gained practical experience in enterprise software engineering processes and team collaboration.

EDUCATION

New Bulgarian University | Master's Degree, Software Technologies on the Internet
October 2023 – March 2025

Technical University of Sofia | Bachelor's Degree, Informatics and Computer Science
September 2019 – June 2023

Geo Milev Secondary School, Tran | Secondary Education
September 2009 – May 2019

ADDITIONAL COMPETENCIES

- Backend development and maintenance of web applications, primarily using Java-based technologies.
- AI-assisted software development using LLM-based tools for code generation, analysis, and problem-solving.
- Agentic development workflows using shared project knowledge and context to support AI agents.
- Experience working in international teams and communicating technical requirements and solutions.
- Strong teamwork, interpersonal communication, and coordination skills within software engineering teams.
- Familiarity with desktop and mobile operating systems and software troubleshooting.
- Practical and academic exposure to Python, PHP, and C# in addition to core Java technologies.
